$$\frac{a_1}{a_2} = \frac{b_1}{b_2} \neq \frac{c_1}{c_2}$$

For no solution,

$$\Rightarrow \frac{k}{12} = \frac{3}{k} \neq \frac{-(k-3)}{-k}$$

Taking first two parts, we get

$$\frac{k}{12} = \frac{3}{k}$$

$$\Rightarrow k^2 = 36$$

$$\Rightarrow k = \pm 6$$

1/2

Taking last two parts, we get

Thus, P divides SM internally in ratio 1 : 2 and divides SM internally in ratio 2 : 1.

By section formula, coordinates of P are

Now, since Q is the mid point of PM using mid-point formula, coordinates of Q are

$$\left(\frac{6 + 10}{2}, \frac{5 + 5}{2} \right) = \left(\frac{16}{2}, \frac{10}{2} \right) = (8, 5)$$
